

Innsbrook Annual Flower Bed Tour
2014

Bed Preparation

Annually beds pH are checked with a Kellway pH meter, soil test are performed annually and pH is compared. IBK water is high in alkalinity which causes pH to rise when supplemental water is applied, sulfur is applied to lower pH in spring.

Compost is added as required, based on soil test, Ammonium sulfate 20-0-0 is added at 6 week intervals, approximately 3 applications during growing season.

All annual beds are watered with drip irrigation, beds are checked weekly for moisture. Irrigation does not guarantee success.

Bed Annuals

1. Angelonia Angel-face Blue; Proven Winner

Height - 18"-24" Spread – 12"-18" Spacing – 12"

Heat & drought tolerant, deadheading not necessary, full sun, blooms to hard frost, *deer resistant
